NET IMBALANCE refers to the net result of all dislocated moves by location and by equipment size. Surplus flows are expressed as a positive number, deficit flows as a negative number (in red).

MINIMUM REPO MOVES represent the theoretical number of repositioning moves that would be required to correct the Net Imbalance. Please note that this is the minimum number, additional moves are often required depending on actual situations (variations in volume or alternating between surplus/deficit during the time period are two examples of such situations).dislocated moves by location and by equipment size during the respective month.
